
Book Review App - Angular

Objective

You need to create a book review app where you can create a new book then add reviews. You need to demonstrate two way data binding from json to view (HTML).

Task

Create a HTML Layout with 3 Sections

1. HTML Interface for the book review App
2. New Book Input Form (name and year as input)
3. Selected Book Review Input Form (email, note, and star as input)
4. Show the data saved from input form to screen using alert box / console log

Note

1. Create a HTML file which functions is as above
 2. Data inputted is not saved to database (gone on refresh)
